Informação complementar relativa à averiguação das causas de incumprimento dos VP (causas e medidas corretivas):

O incumprimento ao parâmetro pH deve-se às características hidrogeológicas da origem de água. Não foram tomadas medidas corretivas, uma vez que não existe um risco direto para a saúde pública. O incumprimento ao parâmetro DI deve-se também às características hidrogeológicas da origem de água e está a decorrer processo de averiguação da atividade radioativa na água.

Informação complementar relativa à averiguação das causas de incumprimento dos VP (causas e medidas corretivas):

O resultado de alfa total deve-se às características naturais (hidrogeológicas) da origem de água, não foram tomadas medidas porque se concluiu que a dose indicativa é inferior a 0,10 mSv. Relativamente ao Alumínio, a EG mantém um controlo operacional de frequência bimestral no reservatório e na captação para avaliação dos resultados ao longo do ano. Nesta situação foi realizada a Análise de Verificação, constatando-se que o valor obtido respeita o VP recomendado na legislação.

Informação complementar relativa à averiguação das causas de incumprimento dos VP (causas e medidas corretivas):

O incumprimento ao parâmetro pH deve-se às características hidrogeológicas da origem de água. Não foram tomadas medidas corretivas, uma vez que não existe um risco direto para a saúde pública. Relativamente ao incumprimento de radão, este deve-se às características hidrogeológicas da origem de água, nesta situação a EG mantém um controlo operacional de frequência trimestral no reservatório para avaliação dos resultados ao longo do ano. Foi feita a contra-análise com o resultado em conformidade.
